---

Hello there lizardman I believe "primus" make a little stove designed to be used on cliff face's. Its sort of suspended on thin cables. Gas or multi-fuel , check out army and navy stores / camping shop's good luck :)

## I use tripod mount stoves.

---

I then lash the tripod legs to a branch. A line must be strung over the cooking station to hang ALL cooking implements. Wind gusts tend to toss pots of chow.
