
Search results not linked to message?

Posted by eriebuoy - 09/22/2007 10:58pm

I just did a search on this forum messages to find a particular thread and got a nice list of results, however there doesn't seem to be any way to click through from the search page to the thread I want to read . . .

Am I missing something? Not being able to get to a thread from search results is a great big hole for forum software. It must be there somewhere?
